**Integration**: Export your Blender-created models into a game-ready format. Understand the file formats and pipelines, ensuring a smooth transition from Blender to your game engine.

**Tip**: Start simulations in setting up these workflows or automating repetitive tasks in Blender using its Python API.

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

With these in mind, what do I need to do to set up a robust development environment for Blender-based 3D asset creation and game integration?

This is my BCW analysis:

**Strengths**: Leverage the Blender Python API for "headless mode" automation. Understand the Blender Python API for scripting custom tools and workflows. Utilize version control (Git) for managing Blender files and related scripts.

**Weaknesses**: Lack of a standardized development environment. Manual asset import and export processes. Limited understanding of optimal file formats for game engines.

**Challenges**: Ensuring compatibility between different Blender versions and game engine versions. Automating complex asset import and export workflows. Debugging issues in the Blender Python API.

Give me a step-by-step plan to address the weaknesses and mitigate the challenges, ensuring I can effectively leverage the strengths to achieve my goal of robust 3D asset creation and game integration.

Okay, this is a **solid** start! It accurately lists the key strengths, weaknesses, and challenges. The focus on automation, version control, and understanding the Blender Python API is crucial. The emphasis on **robustness** and **clarity** is important.

Here's a step-by-step plan to address the weaknesses and mitigate the challenges, ensuring you can effectively leverage the strengths to achieve your goal of robust 3D asset creation and game integration:

## Recommended Cinematic Workspace Setup

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## Phoner-Based Execution Flow

| Phase | Operation |
|---|---|
| 1. Capture | Webcam/mic → Phoner |
| 2. Encode | Phoner → Opus/H.264 |
| 3. Transmit | Phoner → WebRTC/QUIC |
| 4. Receive | Phoner → Decode |
| 5. Process | Phoner → Blender |
| 6. Render | Blender → Output |
| 7. Stream | Phoner → Viewers |
| 8. Feedback | Viewers → Phoner |

## Where TouchDesigner Fits

TouchDesigner should be outside the loop — it's real-time visuals, not 3D rendering.

## Suggestions Based on Your Current Setup

**Keep using Blender's Python API**: Your existing knowledge is valuable. Focus on automation and robustness.

**Use scene organization**: Leverage Blender's "scenes" to separate different parts of your production (e.g., one scene for capture, another for rendering).

**Use a consistent naming convention for data-added objects**: This will simplify scripting.

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## Want Me To...

- Audit/fix the .bat structure and add the scene logic to your Python scripts?
- Create a minimal test scene that exercises the full pipeline?
- Write a Python script to automate the Blender setup?

Go for it! The goal is stability for the **Cerrillos Multimedia Collective** — this needs to work reliably for live performances.

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## Want Me To...

- Audit/fix the .bat structure and add the scene logic to your Python scripts?
- Create a minimal test scene that exercises the full pipeline?
- Write a Python script to automate the Blender setup?

Go for it! The goal is stability for the **Cerrillos Multimedia Collective** — this needs to work reliably for live performances.

## 1. Queue-Centric Project Architecture

Your project becomes a **renderer queue engine**, where each .blend file is a job:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

Perfect! Let's define the structure of a complete, production-ready .bat file for this workflow.

## 2. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 3. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 4. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 5. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 6. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 7. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 8. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 9. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 10. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 11. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 12. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 13. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 14. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 15. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 16. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 17. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 18. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 19. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 20. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 21. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 22. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 23. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 24. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 25. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 26. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 27. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 28. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 29. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 30. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 31. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 32. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 33. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.makedirs(output_dir, exist_ok=True)

# Command to export selected objects to FBX
export_cmd = f"{blender} -b {blend_file} -P {export_script} -- -o {output_dir}"

print("Exporting selected objects to FBX...")
os.system(export_cmd)
```

## 34. Scene-Lifecycle Design

Each scene should have:

```
# Example: Export all selected objects to FBX
import os
blender = "/path/to/blender"
output_dir = "/path/to/exported_models"
blend_file = "/path/to/your_scene.blend"
export_script = "export_fbx.py"

# Ensure output directory exists
os.mak
```
